document scanning

paperHOST pHscan is a feature-rich document scanning application designed specifically for the production shop that needs to drive high-end scanners. Built around the Kofax platform, pHscan is the answer for owners of Kodak, Bell & Howell, Fujitsu, Canon and many other high volume scanners. pHscan was developed for our document hosting customers with tight integration for indexing and uploading documents to paperHOST.

pHscan leverages the power of the Kofax Adrenaline boards providing advanced image processing features such as de-skew, de-speckle, black border removable, contrast, and image clarity at scan time to name a few. Documents may be indexed either at scan time or batch indexed. pHscan offers the capability to upload to paperHOST in the background and on your schedule.

The indexing is powerful with customizable index fields and a full range of indexing options including barcode reading and ODBC connectivity allowing you to link keyed values to any ODBC compliant database. Profiles for scanning jobs can be saved with specific setting such as scanner settings, index fields, page recognition etc. for repeat scanning jobs.

Features Summary:

- No volume requirements for scanning
- Customizable indexes and indexing options
- ODBC support for automatic populating of index fields
- Image processing enhancements
- Thumbnails and screen navigation tools
- Special indexing options such as data masking, default values forward, etc.
- Import capability
- Bar code and patch code support
- Blank page removal
- Support for leading scanner manufacturers (Canon, Bell & Howell, Fujitsu, Kodak and others)

paperHOST pHscan delivers an easy and intuitive interface for the capture of documents to prepare them for the next steps in a workflow process.
